EXPERIENCE

Senior Full Stack Engineer

December 2025 – September 2026

Pulsegen.io

Hyderabad, India

- Shipped roadmaps, backlogs, a survey builder, feedback insights and onboarding tours, used daily by customers
- Built the frontend of the **AI Copilot**: stream parsing, recovery from malformed or interrupted streams, timeout vs error states, no duplicate sends on retry, and access-scoped citations
- Redesigned the **search API**'s indexing and queries for fuzzy and exact matching (**30s+ to under 1s**), and cut roadmap and backlog API times from 40–50s to under 5s with leaner payloads
- Built **global search** end to end: a Cmd+K palette across work items, insights, tickets and customers, with per-entity access scoping and Atlas **\$search** relevance ranking
- Rebuilt the **kanban board** with virtualised rendering and drag-and-drop that no longer slows down as boards grow, taking large-board dragging from ~7 to **60fps**
- Developed the **notifications engine** end to end: in-app and email, cron-batched digests with subscription handling
- Implemented the frontend for issue-tracker integrations: connection, sync, linking and pushing updates back
- Built an origin-locked embeddable widget (**frame-ancestors** CSP) and magic-link login; patched an XSS bug
- Onboarded and mentored a new full-stack hire through codebase walkthroughs, PR reviews and task breakdowns
- Tech Stack: React, TypeScript, Zustand, TanStack Query, ShadCN, Node.js, MongoDB

Full Stack Engineer

December 2022 – September 2025

Holidify

Bengaluru, India

- Created a B2B marketplace app with **1200+ concurrent users** for travel agents
- Migrated the dashboard end to end to the new stack, cutting page load from **5 to 0.7 seconds**, and added JWT authentication used by both the web dashboard and the Android app
- Built the agent enrollment and retention flow, which onboarded **1500+ new agents** (as of June 2025)
- Tech Stack: Django, Django REST Framework, React Native, JavaScript, HTML/SASS, PHP

Full Stack Developer Intern

November 2022 – December 2022

Inkers Tech

Bengaluru, India

- Built reusable React UI components and migrated the API layer to RTK Query

PROJECTS

Workouter | *React Native, Expo, TypeScript, Go, PostgreSQL, Docker, Groq*

July 2026 – Present

- Built an offline Expo Android app for following a weekly training plan, with sets pre-filled for one-tap logging
- Built a Go and Postgres backend where an **LLM agent** plans each training day through tool calls, with every plan checked against training rules before it is saved
- Scored the agent's plans against real training weeks, and kept every request within Groq's 8k-token limit

TypeDuel | *TypeScript, HTML/CSS, Node.js, WebSockets*

May – June 2026

- Built a multiplayer typing game (MVC) with WebSocket rooms to race a live opponent, or a difficulty-scaled ghost
- Added live WPM and accuracy, match history and rematch; live at type-duel-lovat.vercel.app

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Go, Python, SQL (MySQL, Postgres), NoSQL (MongoDB), HTML/CSS

Frameworks/Libraries: React, React Native, Next.js, Node.js/Express, Django, Zustand, TanStack Query, ShadCN

Developer Tools: Git, GitHub Actions, Docker, Claude Code, Cursor, Antigravity

EDUCATION

RCC Institute of Information Technology

Kolkata, India

BTech in Computer Science and Engineering

June 2022

DAV Public School

Kolkata, India

AISSCE

May 2018
