Aditya Raj Singh

Senior Full Stack Engineer

+91 7044154688 | adityarajsingh64@gmail.com | LinkedIn | github.com/DinoWithCurls

Frontend-focused Full Stack Engineer with ∼4 years of experience building and shipping web, mobile and backend products at startups, and more recently, AI applications built on LLMs.

Experience

Senior Full Stack Engineer December 2025 – September 2026

Pulsegen.io – Customer-feedback and product-management platform *Hyderabad, India*

- Built the frontend of the **AI Copilot**, used daily by 40+ people: streamed answers with interrupted-stream recovery, error handling and retries without duplicate sends, and access-scoped citations
- Built customer-requested **Cmd+K global search** across 7 collections with per-entity access scoping, in under 2s
- Optimised the feedback search API from **30s+ to under 1s** and the roadmap and backlog APIs from 40–50s to under 5s; virtualised the Kanban board, taking it from ∼7 to 60 FPS
- Helped stabilise the product in its first 2 months, then shipped roadmaps, backlogs, survey builder and feedback insights (∼300 daily users across 5 companies); worked with customer teams to turn their requests into requirements. Customers included Chargebee, BrowserStack, MoEngage, Track3D, FranConnect and Scrut

Full Stack Engineer December 2022 – September 2025

Holidify – Travel planner and leads marketplace platform *Bengaluru, India*

- Built and maintained features for TripCrafters, Holidify's B2B travel-agent marketplace supporting **1,200+ concurrent users**, where agents manage customers, itineraries and bookings and buy consumer-platform leads
- Independently migrated the marketplace's business logic and APIs from PHP to Django, adding JWT authentication for web and mobile clients; backend and database optimisation cut dashboard load from ∼5s to **0.7s**
- Built the React Native app from scratch (marketplace and learning management), ported the PHP web frontend to Django templates and added agent sign-up, verification and retention flows that onboarded **1,500+ agents**

Software Engineering Intern November 2022 – December 2022

Inkers Technology – Construction technology and AI company *Bengaluru, India*

- Built reusable React UI components and migrated the API layer to Redux Toolkit Query (RTK Query)

Projects

Workouter | *React Native, Expo, TypeScript, Go, PostgreSQL, Docker, Groq API* July 2026 – Present

Offline-first workout planning app with conflict-safe sync and an LLM-powered backend

- Built a tool-using **LLM agent** in Go on the Groq API that generates structured workout plans, with dynamic tool schemas, history retrieval, token-budgeted generation, and async jobs with retries and resumable runs
- Built a Go validation layer that enforces workout-domain rules (exercise choice, movement constraints, load progression, sets and reps, injury restrictions) and feeds violations back into generation and retries
- Designed a history-driven evaluation that backtests plan agreement with past prescribed and completed workouts, with progression metrics, a rule-based baseline, synthetic scenarios and regression checks

TypeDuel | *TypeScript, HTML, CSS, Node.js, WebSockets* May 2026 – June 2026

Real-time multiplayer typing game *type-duel-lovat.vercel.app*

- Built room-based matchmaking, live opponent races, a difficulty-scaled ghost mode, WPM/accuracy tracking, match history and rematches

Technical Skills

Languages: JavaScript, TypeScript, Python, Go, SQL, HTML, CSS/SCSS/SASS
Frontend: React, React Native, Zustand, TanStack Query, ShadCN UI, Tailwind CSS | **Testing**: Jest, Playwright
Backend: Node.js, Express.js, Django, Django REST Framework, PHP, REST APIs, WebSockets
Databases: MongoDB, MySQL, PostgreSQL | **Tools**: Git, GitHub, GitHub Actions, Docker, Expo
AI Development Tools: Claude Code, Cursor, Antigravity

Education

RCC Institute of Information Technology Kolkata, India

Bachelor of Technology in Computer Science and Engineering *June 2022*
